Introduction

- **Mission Statement**
- **Mission Objectives**

Mission Statement

Our mission is to provide and develop quality affordable leasing opportunities for students in UMD.

Main Objectives

- Renters(students) can find comparable renting house and leasing communities' information in our database through the website.
- Our users can register and log in our website to sign leases and records.

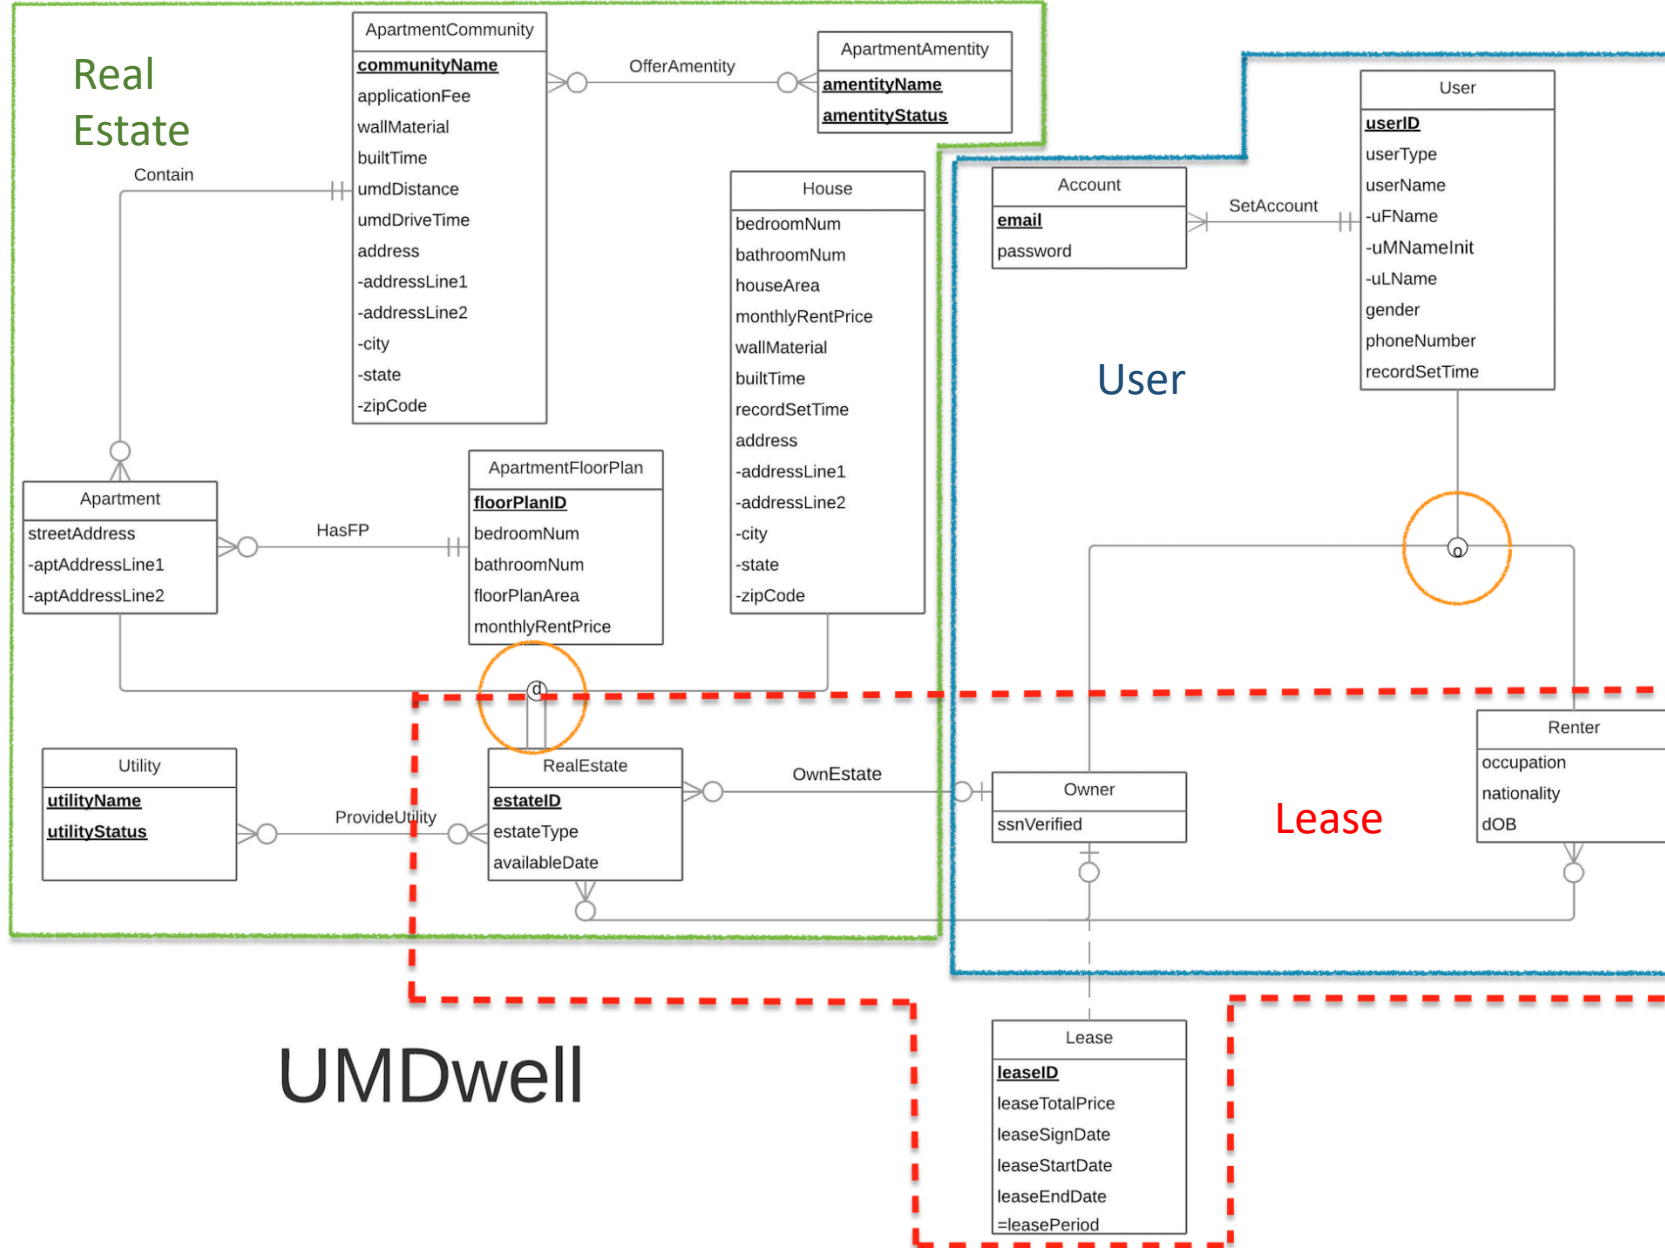

Database

Design

- **Conceptual Database Design**
- **Logical Database Design**
- **Physical Database Design**

Conceptual Database Design

Logical Database Design

----User----

User(**userID**, userType, gender, uFName, uMNameInit, uLName, phoneNumber, recordSetTime)

Owner (**ownerID**,ssnVerified)

Renter (**renterID**, occupation, nationality, dOB)

----Account----

Account(**email**, password, *userID*)

----Real Estate----

RealEstate(**estateID**, estateType, availableDate, *ownerID*)

House(**houseID**, addressLine1, addressLine2, city, state, zipCode, bedroomNum, bathroomNum, houseArea, monthlyRentPrice, wallMaterial, builtTime, recordSetTime)

Apartment(**aptID**, addressLine1, addressLine2, *communityName*, *floorPlanID*)

----ApartmentCommunity----

ApartmentCommunity(**communityName**, addressLine1, addressLine2, city, state, zipCode wallMaterial, builtTime, applicationFee, wallMaterial, builtTime, umdDistance, umdDriveTime)

ApartmentFloorPlan (**floorPlanID**, bedroomNum, bathroomNum, floorPlanArea, monthlyRentPrice)

----Utility&Amenity----

ApartmentAmenity (**amenityName**, **amenityStatus**)

OfferAmenity(**communityName**,**amenityName**,**amenityStatus**)

Utility(**utilityName**, **utilityStatus**)

ProvideUtility(**estateID**, **utilityName**,**utilityStatus**)

----Lease----

Lease(**leaseID**, leaseTotalPrice, leaseSignDate, leaseStartDate, leaseEndDate, *estateID*, *mainRenterID*, *ownerID*)

Physical Database Design

- Create Table

```
CREATE TABLE [UMDwell.RealEstate_T] (  
    estateID CHAR (9) NOT NULL,  
    estateType CHAR(1) NOT NULL  
        CHECK (estateType IN ('A', 'H')),  
    ownerID CHAR (9),  
    availableDate DATE DEFAULT CURRENT_TIMESTAMP,  
    CONSTRAINT pk_RealEstate_estateID PRIMARY KEY (estateID),  
    CONSTRAINT fk_RealEstate_ownerID FOREIGN KEY (ownerID)  
        REFERENCES [UMDwell.Owner_T](ownerID)  
        ON DELETE NO ACTION ON UPDATE NO ACTION,  
);
```

Application

Two Cases

Case1:

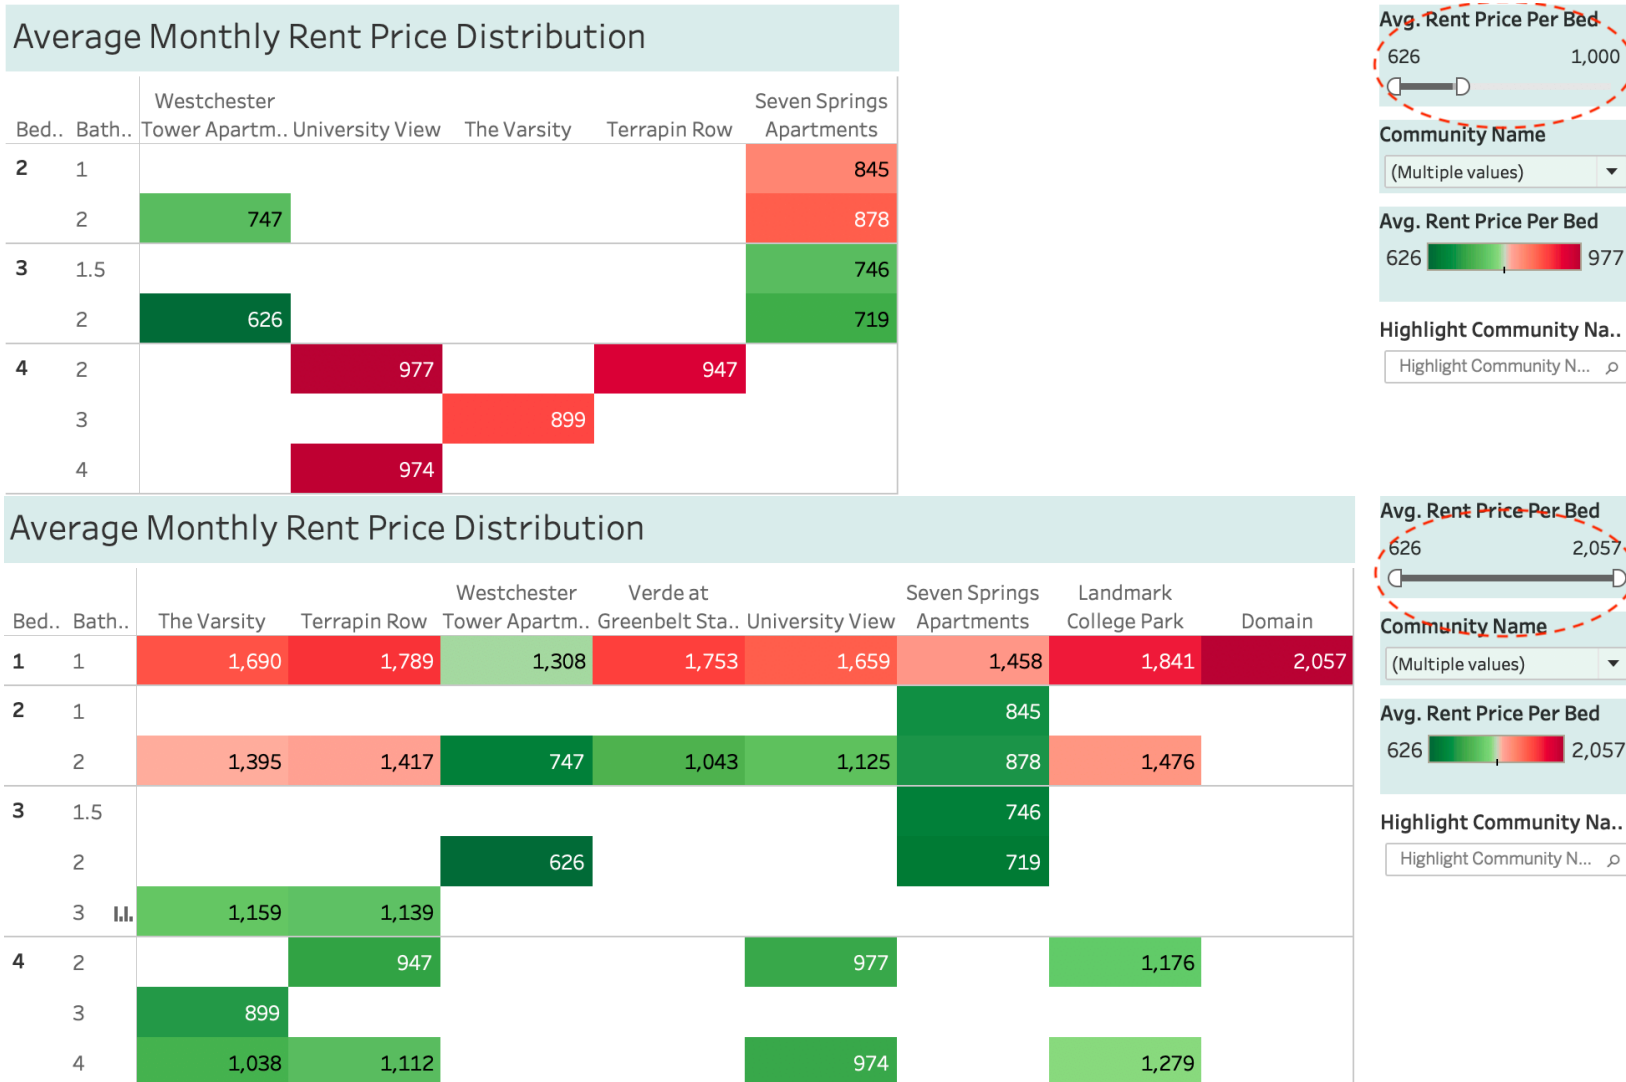

What are average monthly rent prices under \$1,000 for each floor plan in each apartment community ?

```
SELECT
    c.communityName,bedroomNum,bathroomNum,
    convert(int,AVG(monthlyRentPrice/bedroomNum))
    AS 'Average Rent Price'
FROM
    [UMDwell.Apartment_T]a,[UMDwell.ApartmentFloorPlan_T]f,
    [UMDwell.ApartmentCommunity_T] c
WHERE
    a.floorPlanID=f.floorPlanID AND
    c.communityName = a.communityName
GROUP BY c.communityName, bedroomNum, bathroomNum
HAVING AVG(monthlyRentPrice/bedroomNum)< 1000
ORDER BY c.communityName, bedroomNum, bathroomNum;
```

	communityName	bedroomNum	bathroomNum	Average Rent Price
1	Seven Springs Apartments	2	1.0	845
2	Seven Springs Apartments	2	2.0	877
3	Seven Springs Apartments	3	1.5	745
4	Seven Springs Apartments	3	2.0	718
5	Terrapin Row	4	2.0	946
6	The Varsity	4	3.0	899
7	University View	4	2.0	977
8	University View	4	4.0	974
9	Westchester Tower Apartment Homes	2	2.0	746
10	Westchester Tower Apartment Homes	3	2.0	625

Case1:

What are average monthly rent prices under \$1,000 for each floor plan in each apartment?

Case2:

What amenities does each apartment community offer ?

```
SELECT c.communityName,m.amenityName
FROM [UMDwell.Apartment_T] c,
[UMDwell.ApartmentAmenity_T] m,
[UMDwell.offerAmenity_T] o
WHERE o.communityName=c.communityName
AND o.amenityName=m.amenityName
AND m.amenityStatus=o.amenityStatus
AND m.amenityStatus='yes'
GROUP BY c.communityName,m.amenityName
ORDER BY c.communityName,m.amenityName;
```

	communityName	amenityName
1	Domain	Air Conditioning
2	Domain	Dishwasher
3	Domain	Fitness Center
4	Domain	Furnished

Application

UMDwell Website

Back-end Information:

- Server: Apache Tomcat 8.5.9
- Database: mssqlab.rhsmith.umd.edu,9758
- Major Techniques: session; cookies; servlet
Java Database ConenectionPool(JDBC)

Informational Function:

- Have an overall view from different apartment communities, such as Communities' built time, amenities, and easy access to compare floor plans' price, areas, availability.

Operational Function:

- We are able to record and update user's information to the database.
- Such as Register, Login, Change password.
